# SANDESH GHULE

Mumbai, Maharashtra, India | sandeshghule52@gmail.com | +91 9137892677 | LinkedIn | GitHub | Portfolio

## PROFESSIONAL SUMMARY

Full Stack Developer Intern with hands-on experience building backend systems, REST APIs, and data-driven web applications. Proficient in Python, SQL, and PostgreSQL, with practical experience designing relational database schemas, building FastAPI backends with JWT authentication, and deploying production applications using Docker. Exposure to React (frontend), Node.js, and NoSQL databases. Built and deployed real-world full-stack systems for live business operations.

## EDUCATION

**Master of Computer Application** — Mumbai University
2024 – 2026

**Bachelor of Computer Application** — Tilak Maharashtra Vidyapeeth
2021 – 2024

## SKILLS

- **Programming:** Python, JavaScript, HTML, CSS, SQL
- **Frontend & Full Stack:** React (exposure), Node.js (exposure), Responsive UI design
- **Backend & APIs:** FastAPI, REST API design, JWT Authentication
- **Databases:** PostgreSQL, MySQL, SQLite, SQL Server, Firebase (NoSQL)
- **DevOps & Tools:** Docker, Git, GitHub, Linux (Basic), Nginx
- **Data & Analytics:** Pandas, NumPy, Matplotlib, Scikit-learn
- **AI & Applied:** Groq API, Prompt Engineering, Streamlit, LLM API integration

## EXPERIENCE

**Python Developer Intern — Luppiter Tech | Jan 2026 – Jun 2026 | Mumbai**

- Developed and maintained backend logic using Python and MySQL for a CMMS Breakdown Management System for client ESAB Industries — covering data storage design, API integration, and breakdown-tracking workflows.
- Collaborated with frontend React 18 and QA teams across the full feature lifecycle to integrate backend logic into production-ready client-facing web applications.
- Built Python analytics service generating automated MTTR/MTBF reports using Pandas and Matplotlib, integrating data outputs into a full-stack web application.
- Applied OOP principles, code review feedback, and debugging practices to maintain code quality and production reliability throughout the development lifecycle.

## PROJECTS

**Rameshwar Mobility Platform — Full Stack Production System | Python, FastAPI, PostgreSQL, React, Docker**

- Designed and built a production full-stack application — FastAPI Python backend with JWT-secured REST API endpoints and a React frontend, deployed to GoDaddy using Docker and Nginx.
- Architected a relational PostgreSQL database schema (9 normalized tables) managing bookings, drivers, vehicles, customers, and expenses for a live transport business.
- Implemented responsive UI serving an admin dashboard and public-facing website, with data validation, error handling, and clean OOP design patterns throughout.

Live: rameshwartravels.in

**QueryLens — AI-Powered Web Application | Python, Streamlit, Groq API, SQLite**

- Built a Python web application that converts natural-language questions into executable SQL, runs them safely against a live database, and returns results with explanations — demonstrating end-to-end Python application development with external API integration.
- Implemented a safety layer with read-only database connections and destructive command blocking using Python validation logic.

Live: QueryLens App | GitHub

**ESAB CMMS — Full-Stack Maintenance System | Python, PostgreSQL, Pandas, Node.js, React**

- Built a full-stack CMMS web application with Node.js/React frontend and Python backend, including PostgreSQL schema design and automated analytics reporting.
- Identified and remediated a supply-chain security vulnerability; debugged and deployed the application to production.
